- Gapping up 8.0% pre-market (1.0x its typical daily move; market +0.3%)
- Heavily shorted: 28.4% of float, 8.6 days to cover. Good news can trigger a short squeeze; bad news tends to hit harder
- Options lean bullish: 2.3 calls open for every put

Signals

- Trading at $8.67 pre-market, +7.97% vs. last close
- Last session: -4.63% (Down)

- No forward P/E: analysts expect a loss over the next 12 months
- Short interest 28.4% of float (very high), 8.6 days to cover (high), +4% vs. prior report. A crowded short: squeeze potential on good news, but many traders expect growth or the valuation to disappoint.
- Open interest, next 30 days: 80K calls vs. 35K puts. Put/call 0.44 (very bullish): call-heavy, traders positioned for gains. At extremes it can also mean froth.

Reading short interest, options and cash runway

These show how traders are betting, not how fast the business is growing: they hint at near-term volatility and sentiment. Short interest is reported twice a month; open interest counts option contracts expiring in the next 30 days, and calls expiring this week are flagged when they're 50% or more of those. Institutional ownership comes from funds' quarterly 13F filings, so it moves in steps as filings arrive (mostly mid-Feb, May, Aug and Nov). It can top 100% because lent-out shares get counted twice. Forward P/E uses analysts' earnings estimates for the next 12 months. Net debt is debt minus cash (negative means more cash than debt). Cash runway is cash divided by the cash the business burned over the last 12 months, shown only for companies losing cash.

Short interest (% of float)

under 5%	**Low**	Few bets against the stock; the price mostly follows the business.
5%–10%	**Moderate**	Some skepticism; normal for fast-growing or volatile stocks.
10%–20%	**High**	A sizable bet on a decline. Moves get bigger both ways, and good news can force shorts to buy back.
20% and up	**Very high**	A crowded short: squeeze potential on good news, but many traders expect growth or the valuation to disappoint.

Days to cover

under 2	**Low**	Shorts could exit within a couple of days of normal trading.
2–5	**Moderate**	Shorts would need most of a week to exit.
5–10	**High**	Exiting takes over a week, so a rally can feed on itself as shorts buy back.
10 and up	**Very high**	Shorts are boxed in: classic short-squeeze conditions if the news turns good.

Put/call open interest

under 0.5	**Very bullish**	Call-heavy, traders positioned for gains. At extremes it can also mean froth.
0.5–0.8	**Bullish**	More calls than puts, typical for a stock people expect to grow.
0.8–1.2	**Neutral**	Bets roughly balanced.
1.2–1.5	**Cautious**	More puts, from holders hedging or traders betting on a drop.
1.5 and up	**Bearish**	Put-heavy, strong demand for downside protection. Contrarians sometimes read extreme pessimism as a sign of a bottom.

Cash runway (months)

under 12	**Short**	Under a year of cash at the current burn. Expect a share sale or new debt soon, which can dilute holders or add interest costs.
12–24	**Moderate**	A year or two of cash. A raise is likely before the business pays for itself.
24 and up	**Long**	Two years or more of cash, so no near-term pressure to raise money.
